Practical Approach To Effective Sand Prediction, Control ...

Sand production from the reservoir is caused by the structural failure of borehole wall rock. The internal causes of sand production from the reservoir are the stress state of borehole wall rock and the tensile strength of rock (affected chiefly by consolidation strength of rock), whereas external causes are the producing pressure

drawdown value and the change in reservoir fluid pressure.

Another way the experiment can be improved is a better sample of the mixture was obtained; the mixture that we had collected consisted of much more liquid making our final ratio of sand:shells:salt:water approximately 2.5:1:30:67 whereas is we had taken a difference sample with less liquid and more sand then the ratio can drastically change.
