Coatings for Turbine Blades - Harry Bhadeshia

Thermal barrier coatings (TBCs) are advanced materials systems usually applied to metallic surfaces operating at elevated temperatures, such as gas turbine or aero-engine parts, as a form of exhaust heat management. These 100 μm to 2 mm thick coatings of thermally insulating materials serve to insulate components from large and prolonged heat loads and can sustain an appreciable temperature ...

Gas Turbine Metallurgy, Coatings and Repair Technology ...

Gas turbines are of prime importance in a range of industrial sectors, particularly for power generation and for propulsion of aircraft and marine craft. Ceramic coatings within such turbines

represent the predominant area of their development, playing increasingly key roles in providing protection against over-heating and oxidation of metallic components.

Thermal Spray Coatings — Composites and Coatings Group

Coating technology has become an integral part of manufacture of gas turbine engine components operating at high temperatures, as this is the only way a combination of high level of mechanical properties and excellent resistance to oxidation / hot corrosion resistance could be achieved.

Materials for Gas Turbines An Overview

The gas turbine engine used in offshore oil and gas central processing platform. Many other MMCs are being explored for applications in different parts and kinds of gas turbines. Niobium or rhenium are metals with similarities to molybdenum that can also be alloyed with silicon or cobalt to create MMCs and could possibly be used in specific situations [4,5].

High-Temperature Materials For Gas Turbines And Their Future

Indestructible Paint has for many years supplied coatings for flight turbines to most of the world's aero engine manufacturers. Over this period, much development work had been conducted, to

smooth the operation of aircraft engines as performance increases and a need for cleaner engines grew. Utilising the technologies developed over this time, Indestructible can now offer similar high-performance coatings for the Power Generation and Industrial Gas Turbines markets.

Typical coatings include; Corrosion Coatings. This technology is used in the gas turbine industry to coat compressor components, such as blades, vanes, blisks, and rotors. Typically used as a sacrificial or corrosion inhibiting layer for atmospheric protection, this process applies a paint-like, thermally cured coating.
