A programmable logic controller (PLC) or programmable controller is an industrial digital computer which has been ruggedized and adapted for the control of manufacturing processes, such as assembly lines, or robotic devices, or any activity that requires high reliability, ease of programming and process fault diagnosis.. PLCs can range from small modular devices with tens of inputs and outputs ...

Programmable logic controller - Wikipedia

Programmable Logic Controllers continuously monitors the input values from various input sensing devices (e.g. accelerometer, weight scale, hardwired signals, etc.) and produces corresponding output depending on the nature of production and industry. A typical block diagram of PLC consists of five parts namely: Rack or chassis; Power Supply Module

Summary of Unit 22 - Programmable Logic Controllers

Programmable Logic Controller by Unitronics Unitronics is a pioneer in the manufacture and design of Programmable Logic Controllers with integrated HMI panels and built-in I/O. They launched the very first All-in-One PLC on the market and have continued to improve the technology based on market feedback and industry advancements.

What is PLC ? Programmable Logic Controller - Unitronics

A programmable logic controller (PLC) is a small, modular solid state computer with customized instructions for performing a particular task. PLCs, which are used in industrial control systems (ICS) for a wide variety of industries, have largely replaced mechanical relays, drum sequencers and cam timers.
