Hypopituitarism Following Traumatic Brain Injury

Post-traumatic hypopituitarism (PTHP) was recognized more than 80 years ago, but it was thought to be a rare occurrence. Recently, clinical evidence has demonstrated that TBI may frequently cause hypothalamic-pituitary dysfunction, probably contributing to a delayed or hampered recovery from TBI.

Hypopituitarism after traumatic brain injury.

Traumatic brain injury (TBI) is the commonest cause of death and disability in young adults living in industrialised countries. Recently, several studies have shown that hypopituitarism is a common complication of head trauma, with a prevalence of at least 25% among patients who were studied months or years following injury.

(Bondanelli et al., 2010). Vascular damage to the pituitary can also be caused by several mechanisms: (1) Traumatic damage to the long hypophyseal portal veins and subsequent venous infarction are thought to be the

Hypopituitarism following traumatic brain injury ...

OBJECTIVE: Traumatic brain injury (TBI) has emerged as an important cause of hypopituitarism. However, considerable variations in the prevalence of hypopituitarism are reported. These can partly be explained by severity of trauma and timing of hormonal evaluation, but may also be dependent on endocrine tests and criteria used for diagnosis of hypopituitarism.

Hypopituitarism following traumatic brain injury ...

Risk factors for hypopituitarism after traumatic brain injury In the same systematic review, after pooling of all relevant studies, severity of brain injury was found to be associated with occurrence of hypopituitarism. Several prospective studies with a follow-up of 1-3 years confirm the results of previous retrospective analyses.

Hypopituitarism and brain injury: recent advances in ...

Evidence demonstrates that the prevalence of hypopituitarism after traumatic brain injury (TBI) is higher than previously anticipated and leads to significant morbidity. Given the prevalence of TBI, there may be a significant pool of patients with undiagnosed hypopituitarism.

Traumatic brain injury and hypopituitarism - ACNR | Paper ...

Traumatic Brain Injury and Hypopituitarism Brain injury may cause damage to the hypothalamus and/or pituitary gland. Although the true incidence of brain injury and hypopituitarism remains unclear, the poor outcome for patients who go unrecognised could be devastating , with morbidity and the potential for mortality.

Traumatic Brain Injury and Hypopituitarism | The Pituitary ...

Hypopituitarism can occur immediately following a TBI, or it can occur months or years later. The correlation of TBI to deficiency of GH and ADH only is a medical myth. The array of endocrine dysfunction can be vast and affect LH, FSH, TSH, and ACTH.

Hypopituitarism After Brain Injury | BrainLine

Traumatic brain injury (TBI) has emerged as an important cause of hypopituitarism. However, considerable variations in the prevalence of hypopituitarism are reported. These can partly be explained by severity of trauma and timing of hormonal evaluation, but may also be dependent on endocrine tests and criteria used for diagnosis of hypopituitarism.

Hypopituitarism following traumatic brain injury ...

From this preliminary study, some degree of hypopituitarism appears to occur in approximately 40% of patients with moderate or severe head injury, with GH and gonadotroph deficiencies being most common. A high degree of injury severity and secondary cerebral insults are likely risk factors for hypopituitarism.

Hypopituitarism following traumatic brain injury and ...

Post-traumatic hypopituitarism (PTHP) is an important and relatively common complication of TBI (traumatic brain injury). A number of studies have shown that this clinical phenomenon can occur soon after TBI (acute) or later in the chronic phase. Patients with moderate to severe TBI are at a particular risk of developing PTHP.

Hypopituitarism post traumatic brain injury (TBI): review

Recent studies have demonstrated that hypopituitarism, and in particular growth hormone (GH) deficiency, is common among survivors of traumatic brain injury (TBI) tested several months or years following head trauma. In addition, it has been shown that post-traumatic neuroendocrine abnormalities occur early and with high frequency.

Hypopituitarism following traumatic brain injury ...

Traumatic brain injury (TBI) is one of the main causes of death and disability in young adults, with consequences ranging from physical disabilities to long-term cognitive, behavioural, psychological and social defects. Hypopituitarism following traumatic brain injury and ...

Acquired hypopituitarism is associated with traumatic brain injury. This neuroendocrine dysfunction can cause both short-term and long-term morbidity resulting in a cognitive, physiological, and behavioral decline, which increases the burden of the disease and the cost of care. Data in the trauma literature is derisory on this subject.

Cureus | Hypopituitarism After Traumatic Brain Injury

Brain injury-related hypopituitarism is under-diagnosed (Schneider et al., 2007; Gasco et al., 2010), but as the health resources of any population are limited, screening every patient who undergoes any head trauma for hypopituitarism should not be recommended.
