Gases consist of tiny particles widely spaced (Figure 13.1). Under typical conditions, the average distance between gas particles is about ten times their diameter. Because of these large distances, the volume occupied by the particles themselves is very small compared to the volume of the empty space around them. For a gas at room temperature

Chapter 13 Highlights Liquids and gases are both fluids, since they flow, but the molecules of a liquid are farther apart than those of a gas and they have a set volume while gases do not. They both take the shape of their container. A common instrument used for measuring air pressure is a barometer.
