The big surprise for many women in their 40s and the years leading up to menopause—a period of time also known as perimenopause—is that the symptoms usually associated with menopause can strike much sooner, wreaking physical, mental and emotional havoc on women’s lives. Unfortunately, many women with perimenopausal symptoms are unaware of what’s happening in their bodies.

Blog - Perimenopause (and how to survive your midlife ...

More enlightened women who are familiar with “perimenopause” too often think of it only in terms of hot flashes, night sweats, menstrual changes,

and some occasional mood swings. The majority of women, including those who are very well informed, are frequently shocked to learn how global the effect hormonal changes can make on depression, anxiety, and overall life satisfaction.

Perimenopause - The Untold Story - BUSINESSWoman ...

Women who are starting perimenopause and/or going through the last two stages may find that their sex drive has decreased. This makes sense because a lot of the desire for sex comes from the natural instinct to reproduce [5] but with decreased ovulations or anovulation, reproduction ceases.

12 Menopause Symptoms Most Women Ignore

Note: Often, conditions women had prior to entering perimenopause become exaggerated (worse) during the menopause transition. 24. Increase in allergies. Note: Many women who suffer from allergies develop worse allergies during the menopausal years. Many women who've never had allergy or respiratory problems may develop them for the first time.

The 34 Symptoms of Menopause - Power Surge | Support for Women

Women start perimenopause at different ages. You may notice signs of progression toward menopause, such as menstrual irregularity, sometime in your 40s. But some women notice changes as early as their mid-30s. The level of estrogen — the main female hormone — in your body rises and falls unevenly during perimenopause.
