Metallurgy is a domain of materials science and engineering that studies the physical and chemical behavior of metallic elements, their inter-metallic compounds, and their mixtures, which are called alloys. Metallurgy encompasses both the science and the technology of metals. That is, the way in which science is applied to the production of metals, and the engineering of metal components used ...

Metallurgy - Wikipedia

Metalworking is the process of working with metals to create individual parts, assemblies, or large-scale structures. The term covers a wide range of work from large ships and bridges to precise engine parts and delicate jewelry. It therefore includes a correspondingly wide range of skills, processes, and tools. Metalworking is a science, art, hobby, industry and trade. Its historical roots span cultures, civilizations, and millennia. Metalworking has evolved from the discovery of smelting vario

22.7.1 Metal Workings. Tooling and die costs in metalworking operations contribute significantly to total production costs. Despite the high investment, wear leads to early failure of metalworking dies. Thermal spray deposition of wear resistant materials onto the parts of a die most prone to wear

economically extends die life.
