DISTRIBUTED COMPUTING PRINCIPLES AND APPLICATIONS M.L.LIU ...

Distributed computing is a much broader technology that has been around for more than three decades now. Simply stated, distributed computing is computing over distributed autonomous computers that communicate only over a network (Figure 9.16). Distributed computing systems are usually treated differently from parallel computing systems or shared-memory systems, where multiple computers share a common memory pool that is used for communication

between the processors.

Distributed Computing - an overview | ScienceDirect Topics

Distributed computing is a field of computer science that studies distributed systems. A distributed system is a system whose components are located on different networked computers, which communicate and coordinate their actions by passing messages to one another. The components interact with one another in order to achieve a common goal. Three significant characteristics of distributed systems are: concurrency of components, lack of a global clock, and independent failure of

components. Example
