These characteristics are similar to cultivating other organisms including bacteria and other protozoa whose growth depends on a minimal concentration of some metabolites secreted from the cells (Raina and Ian, 2015). In contrast, inoculating a higher number of parasites would promote growth, resulting in a shorter latent period and higher number of cells obtained after the logarithmic period.

In vitro growth characteristics and morphological ...

Taken together, the present study not only revealed differences of the growth characteristics among three cohorts of goose GCs from pre-hierarchical, F4-F2 and F1 follicles, but also optimized the in vitro culture system of geese different staged GCs.

Comparison of growth characteristics of in vitro cultured ...

Tumors show a wide range of growth rates in vivo. In general, nonmetastatic (benign) tumors appear to grow slowly, while metastasizing (malignant) tumors proliferate rapidly and contain a large number of dividing cells. In order to analyze if there is a direct relationship between metastatic potential and growth rate (without the influence of host factors), in vitro analyses are necessary.
