The isentropic exponent affects the pressure ratio and the discharge temperature. The working (operating) pressure of R32 is about 12 – 26 Bar (174-377 Psi). It should be noted that while the operating pressure of R32 and R410A is similar, the former has a better ability to exchange heat-load, thus delivering a higher capacity. For more information you can check out this R32 pressure-temperature chart.

Flammability of R32 is 80% burning velocity less than R290 and slightly flammable when compared with R410A. Although, R32 discharge gas temperature is around 20°C higher than R410A and this can damage compressor's motor at some heat pump
