Applied Finite Element Analysis By

FEM is best understood from its practical application, known as finite element analysis (FEA). FEA as applied in engineering is a computational tool for performing engineering analysis . It includes the use of mesh generation techniques for dividing a complex problem into small elements, as well as

the use of software program coded with FEM algorithm.

The finite element method (FEM), an advanced computer technique of structural stress analysis developed in engineering mechanics, was introduced to orthopedic biomechanics in 1972 to evaluate stresses in human bones. Since then, this method has been applied with increasing frequency for stress analyses of bone and bone-prosthesis structures, fracture fixation devices and various kinds of tissues other than bone.

Applied Technical Services performs finite element stress analysis to help clients validate their designs before production. Engineers design products and components with certain factors in mind, such as the type and magnitude of physical loads they will encounter in their intended usage conditions. Ensuring that they perform as required by their service environment means the difference between a successful design and impending structural failure.
