Surgical pathology may be carried as: Paraffin section (paraffin-embedded method). A frozen section (the tissue is frozen and sectioned). This is a rapid method and available during the surgical operation. The complication of the biopsy: There are chances of bleeding in the case of vascular

lesions and liver. There is the possibility of the transplantation of the tumor and this may be seen in the scar area.

Fibrolamellar Carcinoma of Liver. FLC is distinguished from conventional HCC by unique histologic features, namely: parallel fibrous lamellae separate groups of large, polygonal, densely eosinophilic tumor cells, which contain abundant mitochondria. The fibrotic stroma resembles that of the scirrhous pattern of conventional HCC but, in FLC, is present throughout the tumor in dense, parallel lamellae.
