The Hyundai α -series is a multi-valve, four cylinder engine family comprising 1.3, 1.4, 1.5, and 1.6L naturally

aspirated versions and a 1.5L turbocharged version. Introduced in 1992, this was Hyundai's first engine designed entirely in-house. Design objectives were to provide high performance and good fuel economy with excellent durability at a reasonable cost. The first α -series engine marketed was the α -1.5D. It was a single overhead camshaft, twelve valve, inline-four, petrol-based ...

The Alpha engine is a two cylinder engine with two different pistons. This engine design has been used in a lot of experiments including Solar Power experiments for “green” energy. It has a higher efficiency than the other two types of engines so it is typically used more often. The Beta engine has a one cylinder two piston setup.

Alpha — Alpha Hobbies Group

The mechanical configurations of Stirling engines are generally divided into three groups known as the Alpha , Beta , and Gamma arrangements. Alpha engines have two pistons in separate cylinders which are connected in series by a heater, regenerator and cooler. Both Beta and Gamma engines use displacer-piston arrangements, the Beta engine having both the displacer and the piston in an in-line cylinder system, whilst the

Gamma engine uses separate cylinders.

Alpha Engine The figure below shows a standard alpha engine. The working gas inside the engine is repeatedly “shuttled” back and forth between the expansion and compression space, due to the up-and-down motion of the two pistons. This repeatedly forces the working gas back and forth through the heater, regenerator and cooler. As a result, the gas is repeatedly heated and cooled, and power is produced. Alpha engines are the simplest to understand, and are the easiest to construct.

Stirling Engine - Real World Physics Problems

The aim of this project was to design, build, and test a Stirling engine capable of generating between 200-500 watts of electricity. Several designs were studied before settling on an alpha type configuration based around a two-cylinder air compressor.

Design of a Stirling Engine for Electricity Generation

Our interest in this type of engine was established in 2002 when we started in the workshop of DICheP, Department of Chemical and Process Engineering, Faculty of Engineering, in Genoa where the design and construction of a first prototype of a external combustion engine type, the Stirling engine.

Stirling Engine: Construction and Design | Genoastirling

The Stirling Engine (Alpha Configuration)
A fixed amount of air, or other working fluid, is enclosed within two cylinders, one hot and one cold, and shuttles

forwards and back wards between the two. The air is heated and expands in the hot cylinder and is cooled in the cold cylinder where it contracts, giving up its energy to perform mechanical work in the process.
