Die Cutting | Papercraft | Hobbycraft

Die casting is a metal casting process that is characterized by forcing molten metal under high pressure into a mould cavity. The mould cavity is created using two hardened tool steel dies which have been machined into shape and work similarly to an injection mould during the process. Most die castings are made from non-ferrous metals, specifically zinc, copper, aluminium, magnesium, lead, pewter, and tin-based alloys. Depending on the type of metal being cast, a hot- or cold-chamber machine is

For manual die cutting machines, a piece of paper is placed on the platform of the machine. Then, a die in the shape you would like cut is laid on top of the piece of paper. When the die is positioned where you would like the cut to be made, a plastic mat is placed on top of the paper and die to keep them in place and act as a “sandwich.”
