Lyapunov functional L is lower bounded on its domain, $L(u, v) \geq 1$ for every $(u, v) \in D(A)$. K Although we shall not be using the fact explicitly, it is interesting to view equation (1) as a scalar wave equation with damping. This can be achieved by differentiating the first equation with respect to time to obtain $u_{tt} = d_1 u_t + f(u) u_t + d_2 v + \dots$.

Lyapunov Functionals and Stability for FitzHugh-Nagumo Systems

In the theory of ordinary differential equations, Lyapunov functions are scalar functions that may be used to prove the stability of an equilibrium of an ODE. Named after the Russian mathematician Aleksandr Mikhailovich Lyapunov, Lyapunov functions are important to stability theory of dynamical systems and control theory. A similar concept appears in the theory of general state space Markov chains, usually under the name Foster-Lyapunov functions. For certain classes of ODEs, the existence ...

Stability conditions for difference equations with delay can be obtained using Lyapunov functionals. Lyapunov Functionals and Stability of Stochastic Difference Equations describes the general method of Lyapunov functionals construction to investigate the stability of discrete- and continuous-time stochastic Volterra difference equations. The method allows the investigation of the degree to which the stability properties of differential equations are preserved in their difference analogues.
