Radiographic Testing is a non-destructive testing technique using either x-rays or gamma rays to view a component internally. For instance, in the petrochemical industry, it will be used to inspect machinery to detect flaws. It can also be used to inspect weld repairs.

Different Types of Non-Destructive Testing Methods

The progressive development of civil engineering involves the development of

already known methods and the search for new techniques for testing materials, elements, structures, and entire buildings. In these activities, much attention is focused on non-destructive testing (NDT) methods, which, in principle, do not interfere with the structures being tested.
