The cell theory states that: All living species on Earth are composed of cells. A cell is the basic unit of life. All cells arise from pre-existing cells. A modern version of the cell theory was eventually formulated, and it contains the following postulates: Energy flows within the cells. Genetic information is passed on from one cell to the other.

What Is A Cell? - Definition, Structure, Types, Functions

The overall process of cellular reproduction occurs in two steps: cell growth and cell division. During cell growth, the cell ingests certain molecules from its surroundings by selectively carrying them through its cell membrane .

cell | Definition, Types, & Functions | Britannica

A cell is the basic unit of life, essential to maintaining the physiology of the larger organism. In animals, certain organelles metabolize food into energy, and then uses the energy for repair, growth and reproduction. Similarly, chloroplasts in plant cells transform sunlight into energy, a process known as photosynthesis.

Why Are Cells Important for Living Organisms? | Sciencing

The cell is the basic structural, functional, and biological unit of all known organisms. A cell is the smallest unit of life. Cells are often called the "building blocks of life". The study of cells is called cell biology, cellular biology, or cytology. Cells consist of cytoplasm enclosed within a membrane, which contains many biomolecules such as proteins and nucleic acids. Most plant and animal cells are only visible under a light microscope, with dimensions between 1 and 100 micrometres. Ele

Cell (biology) - Wikipedia
