Evolution and Selection - Mrs. Slovacek's Science

The challenge is to distinguish among alternative hypotheses for diversification in natural populations and to determine the relative roles of selection and drift in speciation. Natural selection has always

been considered a key component of adaptive divergence and speciation (2, 15-17), but the importance of selection has been eclipsed in recent decades by a strong focus on the geography of speciation and on the purely genetic mechanisms by which reproductive isolation evolves (see refs).
